Düsseldorf data centres with ISO certification 27001: myLoc data centres officially certified

Düsseldorf, December 7, 2015. The IT landscape is constantly changing and is advancing at a rapid pace. This creates new challenges for private companies and organisations. Due to increasing digitalisation, the operational security of data centres and their server rooms has become an increasingly important topic in today's society. Many companies and private individuals are faced with the question of how the physical IT infrastructure is to be evaluated in terms of security and availability and, above all, how it can be guaranteed. In order to answer these questions, myLoc managed IT AG has decided to have itself certified by TÜV Saarland ISO.With the ISO certification according to ISO 27001 by the experts of TÜV Saarland, we now guarantee both structural and infrastructural aspects such as power and network supply to myLoc customers. The customers can rely on the fact that their data is safely stored in an auditioned data centre location in Düsseldorf.

"Especially in the age of cloud hosting, this aspect has become increasingly important for our customers and their companies. This is one of the reasons why we decided to have the security features of our three data centres certified," says Dennis Thomas, responsible for the IT infrastructure at myLoc. myLoc managed IT AG is pleased about this quality assurance, which is carried out by an independent auditor every year. ISO 27001 means optimal protection for customers with regard to the availability, confidentiality, integrity and authenticity of their data and systems. The certification of the data centre was successfully carried out for all data centres at the Düsseldorf location by TÜV Saarland. We would be pleased to provide you with further information. Request information and send an email to vertrieb@myloc.de or call us at 0211 - 617 08 20.
