New HPE Gen9 servers at myLoc managed IT AG

Düsseldorf, 8 February 2016. myLoc managed IT AG is one of the first German hosters to offer dedicated servers with the new processor generation Intel XEON E3 v5. The Skylake based processor technology offers, besides an increased performance and energy efficiency, the big advantage that DDR4 memory with up to 64 GB is utilized and on top of that at an outstanding price-performance ratio!

The "Dedicated Server M" and "Managed Dedicated Server M" from the myLoc product range are now based on the new DL20e Gen9 server from Hewlett Packard Enterprise and can be rented monthly at favourable conditions. The DL20 Gen9 Server is equipped with the new Intel XEON E3-1240v5 CPU. With performance stats looking like this: 4 x 3.5 GHz including Hyper-Threading and 32 GB DDR4 RAM, the new generation of Proliant servers replaces the previous DL320 Gen8 servers. The main memory of the new product can now be expanded up to 64 GB DDR4 Ram for the first time. In the standard configuration, customers receive their server with 2 x 2,000 GB HDD or 2 x 240 GB SSD hard drives, which can be expanded to 2 x 8,000 GB HDD or 2 x 2,000 GB SSD. Thanks to the 1,000 MBit flat rate, the server is also optimally connected to the Internet.

The new dedicated servers for rent are also available to those interested in our reseller programme. With our new reseller programme, you as a reseller will be personally supported by our sales department and will have a personal contact to whom you can turn at any time with all your concerns. The reseller programme allows providers, resellers and website operators to buy myLoc products at discounted prices and resell them.
