HPE Proliant Gen9 Server as managed server or managed hosting solution

Düsseldorf, 16th February 2017. The myLoc managed IT AG expands its data centre infrastructure with another data centre in the industrial park "In der Steele" in the south of Düsseldorf and thus opens up more space for its business customers. The data centre is an additional location at a distance of 10 km, which is optimal for redundancy solutions. With this space myLoc sets the course for growth, especially in the area of colocation and managed hosting.

"We are very pleased that we have been able to acquire a new data centre in Düsseldorf and will continue to be able to offer highly available IT solutions for our customers in our home city. The new data centre will enable us to expand our colocation and managed hosting even further," explains Christoph Herrnkind, CEO of myLoc managed IT AG.

Through the expansion of the infrastructure, the company is able to implement multi-redundancy scenarios with high demands on availability and security of server systems at all times. For this purpose, myLoc managed IT AG can rely on its data centres at the "Am Gatherhof" location and now the data centre at the "In der Steele" location. Furthermore, the additional location offers growth security for the next few years, as the final stage of expansion of this data processing centre offers space for up to 15,000 servers.

From now on, myLoc customers can create and implement individual managed hosting or colocation solutions with multi-site strategies in cooperation with the sales and technical departments of myLoc managed IT AG. The new data centre for managed hosting and colocation solutions also has redundant UPS and air conditioning systems, emergency power supply systems, a Novec gas extinguishing system and a Lampertz high-security cell with the highest security level.
