

Security requirements for IT infrastructures are growing steadily

Düsseldorf, 07.09.2021. Nowadays, the security of data and information in both private and business environments is an asset that is extremely worth protecting. More and more cyber threats and attacks are being registered and investigated by authorities and companies specialising in cybercrime. The demand and the resulting requirement for a secure environment of IT infrastructure is also increasing for myLoc managed IT AG and its customers.

To ensure that myLoc managed IT AG can meet the requirements of its customers and authorities, our processes and resources in the area of information security have been continuously improved over the past years. This is also proven by the renewed [ISO27001 certification](#), which was carried out by TÜV Saarland.

An active information security management supports myLoc managed IT AG in protecting the availability, confidentiality and integrity of the information of its interested parties in the best possible way. Information of persons or companies must also be protected from external attacks by the customers of myLoc managed IT AG. For this purpose, myLoc managed IT AG offers software-based solutions such as [Kaspersky Antivirus](#) in addition to physical protection mechanisms.

The product, which is offered in cooperation with WIIT S.p.A, can be used by customers in conjunction with their existing managed hosting or colocation product as well as by new customers who have moved their IT infrastructure to another location in order to protect IT infrastructures from cyber attacks. Through the Endpoint Security for Business and Kaspersky Endpoint Detection and Response products, businesses can protect their IT infrastructure from cyber-attacks, vulnerabilities and unauthorised access, starting from mobile devices, workstations to servers and the software they run.

"We are very pleased to be able to offer our customers a complete solution for protecting IT infrastructures with Kaspersky Endpoint Security. With this first cyber security product for our B2B segment, we are beginning our focus on the new cyber security business area at myLoc," explains Christoph Herrkind CEO of myLoc managed IT AG.

With the successful ISO 27001 certification and the new cyber security solutions, customers can increase the security and protection of their IT infrastructure. myLoc managed IT AG always wants to maintain the best possible protection of the availability, confidentiality and integrity of customers' business-critical data and will continue to expand its portfolio in this area.

About myLoc managed IT AG

myLoc operates ISO 27001 certified data centres in Düsseldorf with space for over 30,000 servers. In the world's largest Lampertz high-security cell, sensitive systems of major customers, including banks, insurance companies and ISPs, are protected from external influences.

myLoc offers products under the brands myLoc (colocation and managed hosting, webtropia.com (server and cloud hosting), servdiscount.com (dedicated servers) and Gamed.de (game servers) and has been a company of the Italian [WIIT S.p.A.](#), an Italian premium cloud provider specialised in business-critical application, since 2020.
